

Dwelling

1 JULY 2020

REGIONAL COUNCIL

DWELLINGS CLASS 1A

Includes tiny houses, removal dwellings, transportable dongas, shipping containers and shed homes. Please note the minimum dwelling size for the Laidley Shire area is 60m².

APPLICATION REQUIREMENTS

1. Complete DA Form 2
3. Applicable Fees
4. Copy of QBCC Confirmation of Insurance or copy of Owner Builder Permit
5. Receipt of payment of Q-Leave Portable Long Service Levy (if value of work is \$150 000 or more)
6. A Copy of:
 - Site Plan, Floor Plan & Elevations
 - Contour Plan
 - Structural Plans
 - Footing Design
 - Engineers Certificate (Form 15)
 - Soil Report
 - Energy Efficiency Report & details (Six star minimum)
7. Letter stating method of Termite Protection
8. Evidence of Plumbing Permit

All applications for any type of dwellings need to be assessed by a Building Certifier – please contact Council to discuss further.

Council's preferred method of lodgement is via email to:

mailbox@lvrc.qld.gov.au

Please supply email addresses for applicant/owner or builder where possible.

THE FOLLOWING ITEMS MAY ALSO BE REQUIRED:

-  Bushfire Report and Construction Details for dwellings sited within a bushfire overlay to comply with the nominated Bushfire Attack Level (BAL) for the dwelling (AS3959).
-  Construction details required for dwellings sited within a Transport Noise Corridor complying with the Qld Development Code MP4.4.
-  Any other information or application deemed necessary at application stage by Council's Development Assessment Section.

PLAN REQUIREMENTS

One copy of plans to include site plan; contour plan; dimensioned floor plans with window and door sizes, all external elevations, typical sections showing construction methods, tie-down details, wall bracing, footing/slab design etc. All structural details to be certified by a Registered Professional Engineer of Queensland and Form 15 submitted.

Site plan is to clearly show the boundaries of the site; all existing buildings/structures; location of proposed buildings with distances from boundaries; any easements; location of septic tank and disposal area if applicable.

Contour plan to indicate relative levels of the site; the floor level of the building; any excavation works and retaining walls. The contour plan is required regardless of the slope, but with larger allotments only in the vicinity of the work. The plan must be suitable for the purpose of Council assessing stormwater run-off, suitability of effluent disposal systems and the likelihood of slope stability requirements.

FREQUENTLY ASKED QUESTIONS

What are the boundary setback requirements?

Setback requirements are described in the Queensland Development Code MP1.1 or MP1.2 but they can vary in the planning scheme depending on the zoning of the property. Information regarding boundary setbacks can be obtained through Lockyer Valley Regional Council's Planning Section on 1300 005 872.

How long before the permit will expire?

Building permits for dwellings will expire two (2) years after the approval date. Removal Dwellings will expire twelve (12) months after the approval date.

Will there be any additional fees?

Additional fees may be required if Town Planning or Plumbing and Drainage applications are needed for the approval. Additional fees will apply for building inspections after the Building permit has lapsed.

What inspections will need to be carried out and what is the process?

Required Inspections are noted on the decision notice, which is issued upon approval of the permit. Council prefers at least two working days' notice when booking in inspections, please note: Council's Building Application Number will need to be quoted when booking in inspections.

Can I build over infrastructure (sewer, water, stormwater)?

Building works located close to infrastructure may require a Build Over or Near Queensland Urban Utilities Infrastructure Approval. Engineer's drawings (RPEQ) and a form 15 may be required showing piers to the slab or footings founded below the zone of influence on sewer main. A fee may be applicable with this application. Contact Queensland Urban Utilities on 13 26 57 for further information.

Can I build on the easement or close to it?

Building works on easements require the written permission from the registered owner of the easement. Title searches contain restrictions that may apply in relation to building close to or on an easement.

What are the requirements for fences?

Provided they do not interfere with visibility at road junctions, fences not more than two (2) metres in height do not require an approval. Fences cannot be more than one (1) metre high within a six (6) metre truncation at the corner of a lot with two (2) road frontages. Pool fences must have a building approval.

Do plans have to be certified by an Engineer?

Footings, structural steel and reinforced concrete portions of building work all need the design certified by a Registered Professional Engineer of Queensland. Also any works outside the scope of AS1684 need to be certified by an Engineer.

Can I get the Engineer to do the inspections?

The Building Certifier must carry out all mandatory inspections. In some cases a competent person can perform an inspection or aspects of an inspection but before another person can inspect a stage of the works, the Building Certifier must assess that person as competent to carry out that inspection on their behalf and then give that person permission to do that inspection.

Can I do the work myself or do I need a builder?

Building works can be carried out by a registered builder or an Owner Builder. Where the value of work is \$11,000 or more, Owner Builders will be required to provide proof of the Owner Builders Course and Owner Builder Permit. Please search the following website for further information – <http://www.qbcc.qld.gov.au/home-building-owners/owner-building/overview>

What if I am located in a bushfire overlay?

Building works located in a bushfire overlay will generally require a bushfire report, which must be carried out by a competent person) to determine the Bushfire Attack Level (BAL) complying with AS3959. The BAL will determine the construction requirements to help protect the building from bushfire attack. E.g. Windows may be required to be screened with a specific type of mesh.
