*** Please note - if you have tables and chairs this will reduce the square meterage available for occupants and the total number of allowable occupants will reduce. To determine, deduct the non-useable area size (e.g. total table area) from the entire size to determine the useable area, then divide the usable space by the square meterage. See examples below

- 1 person per 2 square metres - total usable space available 200 m² % 2 = 100 occupants
- 1 person per 4 square metres – total usable space available 200 m² % 4 = 50 occupants
