

Inflatable Soccer Field Setup Instructions

Equipment

- One only 10m x 15m inflatable soccer field packaged as follows:
 - 2 large bags each containing one half of the soccer field
 - 2 electric air blowers
 - Power leads to suit location
 - Minimum of two required – one for each air blower
 - More may be required depending on power source
 - You may need pegs and hammer – these are optional and may need to be self-supplied

Health & Safety

Operators should assess and remain aware of likely risks in the setup and operation of this equipment and are responsible to take all reasonable steps to ensure the safety of all operators, users and other people nearby.

Key considerations include but are not limited to:

- The use of electricity
- Trip hazards
- Sport related injuries such as tripping, collisions, impact from balls, etc
- Other nearby hazards including uneven or abrasive surfaces, solid objects, etc
- Appropriate lifting techniques: it is strongly recommended that the large bags be lifted by a minimum of two people at all times

It is the responsibility of the operator to ensure safe operations.

Inflatable Soccer Field Setup Instructions

Setup

- Select a location suitable for a 10m x 15m field, plus 3m buffer each end for the air blowers, plus a buffer on the sides from objects which may be a hazard (eg, trees, posts, concrete, etc)
- Consider access to power or placement of a generator. Note that air blowers operate from both/each end
- Check the proposed area for trip hazards, uneven or abrasive surfaces, sticks and stones, etc
- Place the large bags towards each end where the goal areas should go
- Unzip the bags and roll the field out
- Orient the field as required so that the two halves meet up appropriately
- Join the halves with the Velcro and ties and secure with a knot that will be reasonably easy to undo after use
- Ensure the large tubes for the blowers extend away from the field and are not twisted
- There are zips at each end to the side of the goals. These need to be zipped up for use to contain the air for maximum efficiency
- Place the blowers so that they connect to the large tubes at the ends, and secure tightly with ties supplied on the tubes
- Connect power leads securely to the blowers and to your power source
- Turn on the power at the source and on the blowers
- You may need to adjust the “shape” of the field as it inflates and support the goal areas
- It is possible to peg the field in place if circumstances require it. The responsible supervisor will need to make that decision and may need to supply suitable pegs and hammer
- The blowers must stay on throughout operation

Packup

- Packup is the reverse of the above
- Ensure you undo the zips to aid the release of the air
- Roll up in such a way as to remove all the air from the field or it won't fit within the bags
 - We recommend you roll the side without the zip first, up to and including the goals, and then the side with the zip that the unzipped area can release air the whole time of packup
- Ensure all items are accounted for
- Return the equipment to Council where and when requested

Damages and Cleaning

- Please report all damages to Council upon return of the equipment
- Please advise if the field requires cleaning (eg, if you had to pack it up in the rain and it needs airing and cleaning)
